WEBSITE AUDIT NOT RUN

This report covers **live ad activity only**, read from the public Meta Ad Library on 2026-10-21. No website was fetched, so it contains **no audit score, no tracking/pixel findings, no page-speed data and no conversion checklist** - those numbers are only real once the full pipeline runs. The complete report for Eastman New Energy is produced with:
python run_pipeline.py https://eastmansolar.in/ "Eastman New Energy" --city Hyderabad

Executive summary. Eastman New Energy is running 4 active Telugu ads on Meta (Aug 29 - Sep 29, 2026) - on-grid and hybrid creatives, both selling the Rs. 78,000 PM Surya Ghar subsidy plus an additional state subsidy - and all four send the click to eastmansolar.in. Eastman is not a local installer: the site is a manufacturer's product catalogue (800 MW in-house panel manufacturing, 1000+ distributors, 400+ OEM partners, part of the Eastman group's 25 GW production).

Where your ad clicks land

the funnel behind the spend

Destination type	Own website (enquiry form behind reCAPTCHA)
Destination	eastmansolar.in ('Learn more') on all 4 ads
What that means	At least the spend lands on an owned site. But the destination is a manufacturer's product catalogue - on-grid, off-grid and hybrid inverter pages - while the ads promise a B2C subsidy. The gap between the ad promise and the page is where the conversion leaks.

What I found

read live, not guessed

! 4 live Telugu ads (Aug 29 - Sep 29, 2026), on-grid and hybrid creatives, all pointing at eastmansolar.in - the spend stays on an owned domain.

! But the destination is a manufacturer's catalogue: 800 MW in-house panel manufacturing, 1000+ distributors, 400+ OEM partners, panels from 50W to 590W - a B2B story for ads selling a B2C subsidy.

! The enquiry form runs behind reCAPTCHA and a character-limited 'claim your subsidy of Rs 78,000' field - friction between the ad promise and the lead.

! Every ad ends with the same 80016 80016 short-code number - a call-centre funnel, not a local-installer one.

! Scale note: this is the solar arm of the Eastman group (25 GW group-wide production), not a local installer - the pitch here is the B2C funnel, not the product.

Recommended next steps

what I would do first

1	**Build a dedicated residential PM Surya Ghar page** The ad promise is 'reduce your bill to zero with Rs 78,000 subsidy'. The page should be a residential subsidy calculator and quote form, not the inverter catalogue.
2	**Cut the form friction** reCAPTCHA plus a limited field on a Rs 78,000 offer loses clicks. Fewer fields, no captcha on the first step.
3	**Install pixel and retargeting on the offer** 4 ads on one offer with no pixel means no way to see who dropped off after the click and no audience to bring back.
4	**Test on-grid vs hybrid against the page** Two creatives selling two product lines to one funnel - a landing page per line tells you which converts.
