LIVE AD ACTIVITY

Bhanu PV Solar

Hyderabad · https://bhanupvsolar.com/ · Ad data pulled 2026-10-23

WEBSITE AUDIT NOT RUN

This report covers **live ad activity only**, read from the public Meta Ad Library on 2026-10-23. No website was fetched, so it contains **no audit score, no tracking/pixel findings, no page-speed data and no conversion checklist** - those numbers are only real once the full pipeline runs. The complete report for Bhanu PV Solar is produced with:
python run_pipeline.py https://bhanupvsolar.com/ "Bhanu PV Solar" --city Hyderabad

Executive summary. Bhanu PV Solar is running 1 active Telugu Meta ad (Facebook), started 13 October 2026, promoting rooftop solar with government subsidy, EMI options and a free site visit. The click lands on an fb.me link inside Facebook, so the spend never reaches bhanupvsolar.com. The advertiser is a national EPC - 50,000+ projects, 90+ MW, #1 Gujarat / #2 India rooftop EPC, 11 states including Telangana - with a Hyderabad office. No Google Ads advertiser record was checked for this report - that requires the full pipeline.

Bhanu PV Solar AP
Running since **Oct 13, 2026** (11 days) | Library ID 1745430353421307

"Telugu subsidy + EMI + free site visit ad promoting rooftop solar with government subsidy, EMI options and a free site visit booking, aimed at Telangana homeowners."

Open the live ad

Where your ad clicks land

the funnel behind the spend

Destination type	Facebook lead form (fb.me)
Destination	fb.me (inside Facebook)
What that means	Every click opens a Facebook surface, not bhanupvsolar.com. For a national brand with 50,000+ projects, that means the Hyderabad campaign builds no owned audience: no pixel, no retargeting pool, no page to test a Hyderabad-specific offer on.

Ads audit - control review

methodology: claude-ads Meta control catalog

Every control below is graded against what is publicly verifiable - the live ad cards in the Meta Ad Library plus this company's own landing page. Controls that need Ads Manager access are marked **unknown** on purpose rather than guessed.

ID	Control	Status	Evidence read live
M01	Meta Pixel installed	**UNKNOWN**	Landing page was not source-checked for this report; needs a page-source pull or account access.
M39	UTM parameters on ad destinations	**GAP**	Live ads click to a Facebook lead form (fb.me) - traffic never reaches a page you own, so no URL can carry UTMs and click data stays inside Meta.
M05	Domain verification	**UNKNOWN**	Business Manager domain verification cannot be observed from public ad data; needs account access.
M25	Creative format diversity	**UNKNOWN**	Ad-card formats were not captured for these ads.
M26	Creative concept coverage	**OK**	3 distinct offer angles in live copy: government subsidy, EMI / financing, free site visit.
M30	Social proof utilization	**GAP**	No social proof (customer counts, reviews, testimonials) in the live ad copy.
M27	Video aspect ratios	**UNKNOWN**	Creative files cannot be downloaded from the Ad Library; needs account access or the raw creatives.
M29	Hook rate	**UNKNOWN**	Video performance metrics are account-only.
M31	UGC / social-native content	**UNKNOWN**	Content style cannot be verified from ad cards alone.
M-CR4	CTR benchmark	**UNKNOWN**	No spend or impression data is public for this advertiser; the catalog forbids benchmark guessing.
M-CR1	Creative freshness	**OK**	Live creatives include recent launches (newest started Oct 13, 2026) - the account is not running one stale ad forever.
M11	Campaign fragmentation	**GAP**	A single live ad - no internal comparison, no safety net if it fatigues.
M18	Campaign objective alignment	**OK**	Ad CTA and destination agree on one job: Facebook lead form (fb.me).
M33	Advantage+ Placements	**UNKNOWN**	Placement automation state is account-only.
M28	Creative fatigue detection	**UNKNOWN**	Frequency and performance decay need account metrics.

Control review result: 3 OK · 3 gaps · 9 unknown (need account access) · 0 not applicable.

Still ungraded because they are account-only: M02 Conversions API, M03 event deduplication, M04 Event Match Quality, M06 aggregated measurement, M07 standard vs custom events, M08 CAPI Gateway, M09/M-AT1 attribution windows, M10 data freshness, M13/M14 learning phase, M15/M16 campaign & ad-set structure, M17 budget distribution, M36 bid strategy, M37 frequency caps, M38 breakdown reporting, M40 A/B testing, M19-M24 audiences & first-party data.

Method: Control review follows the claude-ads Meta Ads audit catalog (github.com/vamsy16/claude-ads, ads/references/meta-audit.md). Each control is graded only where public evidence establishes it - Ad Library ad data and the lead's own landing page. Controls that require Ads Manager access (bidding, budgets, audiences, learning phase, EMQ, CAPI status) are marked unknown on purpose: they cannot be verified from outside the account and are never guessed.

What I found

read live, not guessed

! The one live ad points to an fb.me link inside Facebook - the click never lands on bhanupvsolar.com, so no pixel, no retargeting pool, no testable landing page.

! The site carries the scale proof the ad needs - 50,000+ projects, 90+ MW, #1 Gujarat / #2 India rooftop EPC, 11 states, 500+ dealers, MNRE-approved components - and none of the paid traffic ever sees it.

! Three contact routes are published (toll-free 1800 889 2353, the Hyderabad office number +91 70132 10502 and info@bhanupvsolar.in) while the ad click dead-ends inside Facebook before reaching any of them.

! 1 ad, live since 13 Oct, all cold traffic. There is no retargeting ad behind it and no second creative to test the subsidy angle against the EMI angle.

! The free-site-visit CTA matches the site's own offer - the journey breaks only at the last step, where the click leaves for fb.me.

Recommended next steps

what I would do first

1	**Move the click onto a page you own** Point the ad at a dedicated Hyderabad landing page carrying the same subsidy + EMI + free site visit offer, the local Laxmiguda office details, an enquiry form and the Meta Pixel - so every click is measurable and retargetable.
2	**Install pixel + conversions API** One pixel plus the Conversions API gives you the audience of everyone who clicked but did not enquire - usually 10-20x the people who fill a form.
3	**Give the national scale a local page** A Hyderabad section (office address, local installs, Telangana service promise) turns the 50,000+ projects proof into a reason to enquire locally.
4	**Add a second creative for the EMI angle** The EMI promise is a separate buying trigger from the subsidy promise - a second creative plus its own landing section tells you which one converts.
